AmbrosiaMQ™ – Performance Metrics

U1 Technologies' AmbrosiaMQ™ is a messaging engine focused on addressing the three competing facets of performance, scalability and reliability – while ensuring an easy-to-use and easy-to-manage runtime environment for global deployments.

The chart below demonstrates performance characteristics of AmbrosiaMQ (measured in messages per second) across several variable combinations:

- Number of concurrent subscribers (1, 10, 50 and 100)
- Size of published messages (100 bytes → 10Kbytes)
